‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

REFERENCE NOTES

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F; precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

The four digit identification numbers in the Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.

-	No record.
+	Also later date (dates) or months.
*	Amount included in following measurement.
//	Gage is equipped with a windshield.
B	Adjusted to full month.
C	Data for recorder stations denoted by "C" are processed for special purposes and published in "Hourly Precipitation Data". Length of record for recorder-only stations may be found in the annual issue of "Hourly Precipitation Data".
E	Amount is wholly or partially estimated.
M	Less than a complete month of record available; if average value is entered, less than 10 days of record are missing. See monthly Climatological Data for detailed daily record.
R	Data from recording gage.
T	Trace, an amount too small to measure.
V	Includes total for previous months. V in annual column means total is for a two-year period.
S	Storage precipitation station. Data will be published in the July or August or delayed data December issue of Climatological Data.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Volume LIX No. 1

CHATTANOOGA: 1954

COLORADO - JANUARY 1954

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

The month was considerably warmer and drier than the average January and without severe or damaging storms. All sections showed temperature excesses and precipitation deficiencies.

Except for short periods near the close of the first and second decade and again on the 25th and 26th when temperatures dropped below seasonal with light precipitation, skies generally were clear to partly cloudy with temperatures considerably above normal. Monthly maxima predominated in the Kansas River Basin on the 6th and 7th and elsewhere near the close of the month. The lowest temperature was most common over the western slope on the 1st, and east of the Continental Divide on the 20th and 21st.

The monthly mean temperature, 29.4°, was 6.1° above normal. The highest monthly mean, 40.4°, occurred at Walsenburg, and the lowest 13.6°, at Taylor Park. The monthly maximum, 76°, was recorded on the 7th at Eversoll Ranch, Baca County, and the minimum, a minus 25°, on the 11th at Fraser. The weighted monthly precipitation, 0.49 inch, was 0.44 inch below seasonal. The greatest monthly amount at any station was 6.18 inches at Wolf Creek Pass 4 W, and only a trace was observed at Hermit 9 SE, Lake City, and Bovina 3 NE. The greatest precipitation in any observational day was 2.10 inches at Wolf Creek Pass 4 W on the 5th. Average snowfall for the period was 7.1 inches.

Winter grains, pastures and ranges suffered from lack of moisture and snow cover. Livestock, mostly in feed lots, were generally in very good condition with hay and feed plentiful in most areas. Roads and highways were in good condition with only occasional short periods of icy conditions in the higher elevations. Subsoil moisture and snow on the ground were both deficient throughout the month with only a fair outlook for irrigation and storage water.

WMW

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1 beginning January 1949.

Data in the column formerly headed "No. of Days .01 or more" in Table 2, have been changed to "No. of Days .10 or more" effective January 1, 1954.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder station. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

CHATTANOOGA: 1954

COLORADO - FEBRUARY 1954

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

The month was the warmest and driest February for the entire period of record with unusual wind movement. All sections showed noticeable temperature excesses and pronounced moisture deficiencies.

Except for short periods at the beginning and end of the second decade, and at the close of the month, temperatures were much above seasonal, with the monthly maxima most prevalent on the 8th in the Arkansas and Platte River Basins; on the 12th in the Colorado drainage area; and on the 26th elsewhere. Monthly minima were most frequent on the 28th. Very light and widely scattered precipitation occurred near mid-month and near the close of the second and third decades. Strong soil and snow drifting winds were common throughout the State, but most severe east of the Continental Divide. The weighted monthly mean temperature, 37.4°, was 10.1° above the normal, and an all-time high. The monthly maximum temperature, 83°, occurred at Eversoll Ranch in Baca County, on the 13th, and the minimum, a minus 30°, at Taylor Park on the 16th. Precipitation was only 27% of the normal, with a weighted average of 0.27 inch. The Independence Pass station reported 1.88 inches, the greatest monthly precipitation, while no moisture occurred at nine stations. The greatest 24-hour amount, 1.10 inches, was recorded at Crested Butte on the 14th. Snowfall averaged 3.3 inches for the State, also a record low.

Winter grains, pastures, and ranges suffered severely from the dry, windy conditions, especially over the plains area; and many fields of winter wheat were completely destroyed by drifting soils. Livestock wintered well and hay and feed were plentiful. Except for very short periods, roads and highways were in good condition and most mountain passes were open throughout the month. The outlook for storage and irrigation water was poor to fair at the close of the period.

SEVERE STORMS

Near Westcliffe on the 13th, a moderate tornado, accompanied by several twisters, caused $2,000 damage to farm buildings. Over south central Colorado from the 13th to the 15th, the eastern plains on the 18th, 19th, and 22nd, and the southeastern portion of the State on the 16th, strong winds ripped and drifted top soils, reduced visibility, and slowed transportation. The greatest wind damage was to crops and soil, but considerable property losses also resulted therefrom.

WMW

CORRECTION NOTE

The minus sign failed to print preceding minimum temperatures for the 8th day in Table 5 of this Bulletin for December 1953 and January 1954. Add the minus sign on December 8th for these stations: Alamosa WB AP, Cimarron 3 SE, Climax 2 NW, Craig, Gunnison, Hermit 9 SE, Ignacio 1 N, Norwood, Pagosa Springs, Paradox, State Turkey Experiment Farm, Vallecito Dam, Walden and Wolf Creek Pass 4 W.

Add the minus sign on January 8th for these stations: Gunnison, Hermit 9 SE, Pagosa Springs, and Taylor Park.

These corrections will be republished in the June 1954 issue.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1 beginning January 1949.

Data in the column formerly headed "No. of Days .01 or more" in Table 2, have been changed to "No. of Days .10 or more" effective January 1, 1954.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder station. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

COLORADO

MARCH 1954

Volume LIX No. 3

CHATTANOOGA: 1954

COLORADO - MARCH 1954

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

The month was cooler and drier than the average March, with considerable soil-drifting and snow-drifting winds, especially over the eastern plains.

From the 1st to the 5th, unusually low temperatures prevailed over the entire State, with the monthly minima occurring most frequently on the 3rd. Precipitation during this period was light and widely scattered. Clear to partly cloudy skies and abnormal temperatures were general from the 6th to the 10th, and the monthly maxima most frequent on the latter date. From the 10th, the trend was to cooler and unsettled conditions with general precipitation until mid-month. Strong snow- and soil-drifting winds were common over the eastern plains from the 10th to the 12th, inclusive. During the second half of the month, temperatures fluctuated somewhat with light to moderate occasional precipitation. On the 17th, 18th, and 19th, soil-drifting winds again prevailed over the central and eastern areas. The monthly mean temperature, 33.3°, was 1.1° below the normal, and all sections except the Rio Grande Drainage Basin showed deficiencies. The highest mean was 44.1° at Palisade 1 S; a low of 17.2° obtained at Climax 2 NW. The monthly maximum of 81° occurred at Eversoll Ranch, Baca County, on the 28th, and the minimum, a minus 29°, at Taylor Park, Gunnison County, on the 3rd. The weighted precipitation for the month, 1.02 inches, was 0.34 inch below normal, with all sections showing deficiencies. The greatest monthly amount, 7.82 inches, occurred at Wolf Creek Pass 4 W, and a trace at Monte Vista was the least. Maximum 24-hour precipitation, 2.05 inches, was recorded at Wolf Creek Pass 4 W on the 23rd.

Winter wheat and barley were poor in the southeastern drouth area where many fields were a total loss. Elsewhere, reports ranged from poor to good. Pastures and ranges remained dry and inadequate at the close of the month. Preparation of soil and planting of spring crops was well under way. Fruit buds were in various stages from swelling to full bloom. Frost and low temperatures caused some peach damage, and more severe losses to apricots.

SEVERE STORMS

During the night of the 10th at Wray, a strong wind damaged farm buildings to the extent of $1,000. Over eastern Colorado from the 10th to the 12th, strong winds reaching gale force in many sections were accompanied by moderate snows over the northern counties, and drifting soils in the drouth area. Many roads were closed, motorists marooned, transmission lines damaged, and trees uprooted. Some small buildings were damaged and soils eroded. On the 17th and 18th, similar conditions prevailed over the central and eastern portions of the State, causing somewhat greater damage. One person was killed and four injured as a result of the strong winds. A twister in southeastern Logan County damaged property to the extent of $5,000 on the 24th, and similar disturbances on the 31st at Yuma and Otis did some damage to property and crops.

WMW

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1 beginning January 1949.

Data in the column formerly headed "No. of Days .01 or more" in Table 2, have been changed to "No. of Days .10 or more" effective January 1, 1954.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder station. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

CLIMATOLOGICAL DATA

COLORADO

APRIL 1954
Volume LIX No. 4

CHATTANOOGA: 1954

COLORADO - APRIL 1954

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

The month was characterized by the least average precipitation for the entire period of record and the third highest mean temperature, being exceeded only by the years 1943 and 1946.

Excess temperature departures obtained throughout the month with the exception of a slight deficiency near mid-month and a marked drop on the 29th and 30th. Monthly maxima were most common on the 23rd and 24th, while the lowest temperatures generally occurred on the 1st. Light precipitation occurred over the State near mid-month and more general rains and snows near its close. The weighted monthly mean temperature, 49.5°, was 5.6° above the normal, with excesses in all sections. The highest mean, 60.1°, occurred at Holly, and the least, 31.7°, at Climax 2 NW. The monthly maximum, 93°, was recorded at Eversoll Ranch, Baca County, on the 6th and 24th, and the minimum, a minus 7°, at Taylor Park, Gunnison County, on the 1st. Precipitation averaged 0.47 inch, or 1.26 inches below normal. All sections of the State showed marked deficiencies. Pyramid recorded the greatest amount, 2.09 inches, and only a trace occurred at five stations. The greatest 24-hour amount, 0.91 inch, on the 25th, was reported from Norwood. The average April snowfall, 1.5 inches, was also an all-time low.

Soil preparation and planting of early crops got underway although many sections were too dry for best results, and some replanting was necessary. Winter grains showed only a slight improvement and some fields were abandoned in the drouth area. Livestock generally was in very good condition with good increases and wool yield. Fruits, especially apricots, peaches, and other early varieties, suffered from frost and low temperatures but the extent of damage could not be determined at the close of the month.

Over northern Colorado on the 6th, wind and dust caused some damage to property and crops. At Vineland, near Pueblo, on the 12th, hail and a minor flood caused some damage to vegetation. A twister at Westwood on the 19th resulted in property losses to the extent of $500. Fire, resulting from lightning, caused $5,000 damage to radio equipment near Loma on the 25th.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1 beginning January 1949.

Data in the column formerly headed "No. of Days .01 or more" in Table 2, have been changed to "No. of Days .10 or more" effective January 1, 1954.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder station. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

COLORADO

MAY 1954
Volume LIX No. 5

CHATTANOOGA: 1954

COLORADO - MAY 1954

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Slightly above normal temperatures over most of the State and below seasonal moisture in all sections featured the month's weather.

May opened unsettled and cool until the 3rd with general precipitation, temperatures much below seasonal, and the monthly minima most common on the 2nd and 3rd. For the remainder of the month temperature fluctuations were more moderate with the greater plus departures from the 19th to the 21st, during which period the monthly maxima occurred at practically all stations. Precipitation although subnormal in all sections was well distributed throughout the month with the heaviest amounts reported during mid-month and at the beginning of the 3rd decade. The weighted monthly mean temperature 54.3° was 1.7° above normal with all sections except the Kansas Drainage Basin showing excesses. The monthly maximum temperature 99° occurred at Delta on the 20th and the State minimum 6° at Allenspark and Bailey on the 2nd. Precipitation averaged 1.45 inches, or 0.30 inch below normal. North Lake with 4.57 inches recorded the greatest monthly amount while the least 0.12 inch occurred at Delta. The greatest amount in any 24-hour period was 2.62 inches at Holyoke on the 17th. Snowfall for the State averaged 3.2 inches.

Because of moderate winter conditions most vegetation was considerably advanced at the beginning of the month. Winter grains, ranges and pastures which suffered previously from winds and dryness made fair to good showing. Soil preparation, planting of spring grains and row crops continued throughout the month. Frost and low temperatures caused limited crop damage and necessitated replanting in some areas. The fruit crop outlook was fair to good and thinning and spraying were general at the close of the period. Livestock mostly on summer ranges continued in good to excellent condition with some herds being moved from the drier areas.

SEVERE STORMS

Near Akron on the 15th and 26th hail caused some damage to crops and on the 29th property losses from wind exceeded $2,000. A tornado was observed on the 16th in the sparcely populated section 25 miles southeast of Trinidad, but no damage was reported. A moderate hailstorm over a 100-square mile area near Otis resulted in $25,000 damage to crops. A minor flood damaged bridges, fences and crops on the 26th at Ordway. At Burlington hail caused $1,000 damage to property and losses of $15,000 to crops on the 26th.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1 beginning January 1949.

Data in the column formerly headed "No. of Days .01 or more" in Table 2, have been changed to "No. of Days .10 or more" effective January 1, 1954.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder station. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily precipitation values and monthly total from recording gage.
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

JUNE 1954
Volume LIX No. 6

CHATTANOOGA: 1954

COLORADO - JUNE 1954

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

June 1954 was the seventh consecutive month with below normal precipitation. It was also the fifth of these months with above average temperature. Precipitation averaged 0.64 inch, compared with the normal for June of 1.45 inches. Las Animas and Walsenburg received no precipitation during the month, and Center and Delhi only a trace. The greatest total fell at Holyoke, which reported 4.23 inches, 2.25 inches of which fell on the 14th during a heavy thunderstorm. The greatest deficiency was in the eastern portion of the State. The Kansas Drainage Basin showed a deficiency of 1.55 inches, the Platte 1.02 inches and the Arkansas 0.97 inch. Temperatures averaged 64.4°, which is 2.9° above normal. The greatest excess was in the Arkansas and Kansas Drainage Basins with 5.0° and 4.5°, respectively, above normal being reported. The highest temperature was 110° at Wray on the 23rd, and the lowest, 13°, at Climax 2 NW on the 2nd and at Hermit 7 ESE on the 7th.

It was cool the first three days of June with below freezing temperatures quite common in western Colorado and some scattered frost in northeastern Colorado. Scattered showers, mostly in the mountains and west portion, occurred on the 1st and 2nd. Warmer weather prevailed on the 4th and 5th. Very cold weather moved into Colorado on the 6th and continued through the 8th. Much below freezing temperatures occurred on the 7th in western and northern Colorado. Precipitation accompanied the change to colder weather in western Colorado. A warming trend began on the 9th with much above normal temperatures being recorded for the remainder of the month. Temperatures above 100° were general over eastern Colorado on the 23rd and 24th. Several stations reported record-breaking temperatures on the 23rd, among them Denver WB AP with a reading of 102°, Pueblo WB AP 105°, and the reading of 86° at Leadville equaled their all-time June record. The 105° at Pueblo WB AP was the highest temperature ever recorded there. Widely scattered showers occurred over Colorado almost daily from the 11th through the end of the month. They were most numerous on the 14th, and from the 24th through the 30th.

Small tornadoes near Parker on the 6th, and 10 miles east of Grover on the 19th, did negligible damage. Strong winds occurred over Colorado on the 6th, breaking down trees and blowing out crops, resulting in an estimated $250,000 damage. Hailstorms in Yuma and Washington Counties on the 12th did $50,000 damage. A hailstorm in Logan County on the 14th resulted in $25,000 damage. On the 18th, hailstones up to 2 inches in diameter struck Park County, with $15,000 damage. Hail in Yuma and Weld Counties on the 19th did $19,000 damage. Cheyenne County was visited by a hailstorm on the 20th, with $25,000 damage, mostly to the wheat. A severe hailstorm in Larimer and Weld Counties on the 30th damaged crops and property to an estimated $100,000.

The frost on the 2nd and 7th did considerable damage to crops, especially in western Colorado where the damage was estimated at $300,000. Continued dry weather caused deterioration of nearly all crops. Thinning of sugar beets was completed with irrigation general. Winter wheat was harvested in the east portion with much below normal yield. Elsewhere, wheat was ripening rapidly. The first crop of alfalfa was cut. Fruit in the western portion of the State continued in excellent condition with picking of cherries being almost completed. Ranges and pastures dried rapidly with livestock being moved from many pastures in the eastern portion of the State, however, livestock condition continued good. Irrigation water was in short supply due to the below normal snowfall during the winter.

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1 beginning January 1949.

Data in the column formerly headed "No. of Days .01 or more" in Table 2, have been changed to "No. of Days .10 or more" effective January 1, 1954.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder station. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

CORRECTED DATA WILL BE FOUND ON PAGE 80.

CHATTANOOGA: 1954

COLORADO - JULY 1954

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Continued hot weather with frequent afternoon thundershowers characterized the conditions during July 1954. Temperatures averaged 71.2°, compared to a normal of 67.4°. It was the fourth warmest July on record when compared to data entered in the Comparative Data Table 1. However, since data previous to 1951 was unweighted, this is subject to change. The highest mean temperature was at Holly with an average of 85.2°. The lowest mean was 53.6° at Climax 2 NW. Extremely hot weather prevailed during the second week with Sedgwick reaching 114° on the 11th. This, together with an identical reading in 1933, is the second highest temperature ever reported in Colorado, exceeded only by the 118° at Bennett in 1888. The lowest temperature was 31° at Dillon 1 S. This is the first July on record in which a reading of 30° or lower was not reached.

Precipitation occurred in connection with afternoon thundershowers some place in Colorado on every day of the month except the 10th. The weighted average precipitation was 2.04 inches, or 0.02 inch above normal. However, below normal precipitation occurred in the Kansas Drainage Basin where an average of 1.58 inches fell compared to a normal of 2.56 inches, and the Platte Drainage Basin with an average of 1.88 inch compared to a normal of 2.07 inches. Heaviest precipitation occurred in the Arkansas and Rio Grande Drainage Basins. Lake Moraine received 7.58 inches for the greatest monthly amount, and Northdale 0.21 inch for the least. The greatest 24-hour amount was 2.80 inches at Chivington on the 23rd.

Hot weather prevailed throughout the month. Temperatures of 100° or higher were quite general over the eastern and west-central portions of the State on the 10th, 11th, and 12th. Besides the 114° at Sedgwick, Wray reported a maximum reading of 112°, Holyoke and Holly 110°, Julesburg and Bonny Dam 109°, Las Animas 1 N, Stratton, and Yuma 108°, and Canon City, Eversoll Ranch, John Martin Dam, La Junta, and Fort Lupton 107°. Delta 1 E with a maximum temperature of 103° had the highest reading west of the Continental Divide. Scattered thundershowers occurred almost daily. Very heavy rain fell in the Arkansas Drainage Area on the 22nd, causing the Purgatoire River to rise rapidly, overflowing its banks in a number of places. Even though some damage resulted from the flooding, the water stored in the John Martin Reservoir for irrigation purposes more than compensated for the damage. Many of the thunderstorms during the month were locally very severe. One person was killed when struck by lightning at Coaldale on the 12th. One person was injured at La Salle on the 3rd and at Ordway on the 25th when lightning struck nearby. Quite a large number of cows were killed by lightning. The intense thunderstorm caused several streams to go over their banks, causing local damage of several thousand dollars. A rainstorm at Denver on the 14th caused $500,000 damage due to flooding of basements, etc. Heavy hail fell on Aurora and Hoffman Heights on the 27th, causing an estimated $1,000,000 damage. On the same afternoon, hail near Fowler, Otero County, damaged crops to an estimated $100,000. A tornado was reported 10 miles northeast of Byers on the 28th with no injuries or deaths. Scattered hailstorms over the State caused damage, but to a lesser extent.

The rains over the Arkansas and Rio Grande Basins improved crop conditions considerably. However, the continued deficiency of moisture, coupled with extremely high temperatures in the Platte and Kansas Drainage Basins caused continued deterioration of crops. The fruit crop in the Grand, Gunnison, and Dolores Valleys was excellent, with picking of peaches underway at the end of the month. Hay crops in most areas were short. Pastures and meadows improved in the southern portion of the State, but deteriorated elsewhere. Stock water was short in the northeast but adequate elsewhere. Livestock condition was good, but most had been moved from the ranges in the northeast. Irrigation water supply improved in the Arkansas Drainage Basin, but remained low elsewhere.

Wm.M.P.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1 beginning January 1949.

Data in the column formerly headed "No. of Days .01 or more" in Table 2, have been changed to "No. of Days .10 or more" effective January 1, 1954.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder station. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
AR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

COLORADO - AUGUST 1954

A. W. Cook, Section Director - Denver

WEATHER SUMMARY

Slightly warmer and drier conditions with somewhat unusual temperature extremes and short periods of intensive precipitation and heavy runoff featured the month's weather.

August opened clear and warm until the 6th, during which period the monthly maxima occurred at most stations. Temperatures fluctuated slightly above and below normal with general showers, thunderstorms and occasional heavy downpours from the 7th to the 25th. During this period the monthly minima prevailed and the greater part of the month's precipitation occurred. The month closed with mostly clear skies and a few widely scattered light showers in the southeast portion.

The weighted monthly mean temperature 66.9° was 1.0° above normal with only the Rio Grande River drainage showing a minus departure. The monthly maximum temperature 108° occurred at Holly on the 1st and the State minimum 18° at Fraser on the 19th. Weighted precipitation averaged 1.55 inches or 0.35 inch below seasonal with all sections showing deficiencies. The Limon 8 SSW station with 6.94 inches recorded the greatest monthly amount. Idalia was the driest point with only 0.11 inch. The greatest amount of moisture in any 24-hour period was 3.45 inches at Flagler 2 NW on the 13th. Forty stations reported 24-hour amounts exceeding 1 inch and over 2 inches occurred at 7 points.

Vegetation in general benefited slightly from the near seasonal precipitation but because of moisture deficiency and high temperatures during preceeding months many crops were damaged beyond recovery, especially in the southern dry farming areas. Garden truck and row crops matured rapidly and movement to market and canneries was somewhat earlier than usual. Combining and threshing of winter grains were completed early in the period and harvesting of spring grains neared completion at the close of the month. Corn, alfalfa, clover and other feed crops were short. Pastures and ranges improved slightly and were adequate in the wetter areas and higher elevations, but short and dry in most other sections. Sheep generally were in average condition while shrinkage of cattle was more pronounced. Early fruit yield was light but of good quality. Picking of Elberta peaches got underway as the month closed with a good crop outlook.

SEVERE STORMS

In portions of Elbert, Douglas and El Paso counties on the 5th heavy rain, hail and runoff caused over a million dollars damage to roads, bridges and property adjoining streams. Traffic was interrupted and some crop losses resulted from hail. Some livestock were killed by lightning. On the 6th near Pueblo and on the 7th near Palmer Lake heavy rain and runoff slowed traffic, damaged roads, highways and bridges and eroded pastures and crop land. A small tornado and hail in an isolated forested area near Deadman Hill on the 7th felled some timber and the hail accumulated to a depth of 6 inches on the ground. On the 12th near New Castle and at Penrose heavy rain and runoff damaged highways and railroads. Hailstones the size of marbles accumulated to a depth of 2 inches at Lime on the 12th causing some property and crop losses. One person was killed by lightning in the Black Forest on the 13th. In the Loma-Mack section 5 percent to 30 percent crop losses resulted from heavy hail on the 13th. In extreme northeastern Colorado on the 16th hail, wind and rain damaged crops and property to the extent of $350,000. A windstorm moving from the northwest over Eads on the 18th, accompanied by hail and torrential rains, with hailstones the size of golf balls to hen's eggs, caused damage to buildings and automobiles, and one person was injured by flying glass. Moderate crop losses from hail were reported at Montrose on the 20th. On the 20th and 21st near Evergreen and in the Plum and Cherry Creek drainage, rain and runoff eroded roads, highways and stream-adjoining property.

REACTIVATED STATION

Station	Index No.	County	Drainage‡	Latitude	Longitude	Elevation	Observation time Temp.	Observation time Precip.	Observer	Refer to tables
GUFFEY 10 SE	3656	FREMONT	1	38 [illegible]	105 23	8200		4P	MRS CLARA G NASH	[illegible]

‡ [illegible] 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1 beginning January 1949.

Data in the column formerly headed "No. of Days .01 or more" in Table 2, have been changed to "No. of days .10 or more" effective January 1, 1954.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

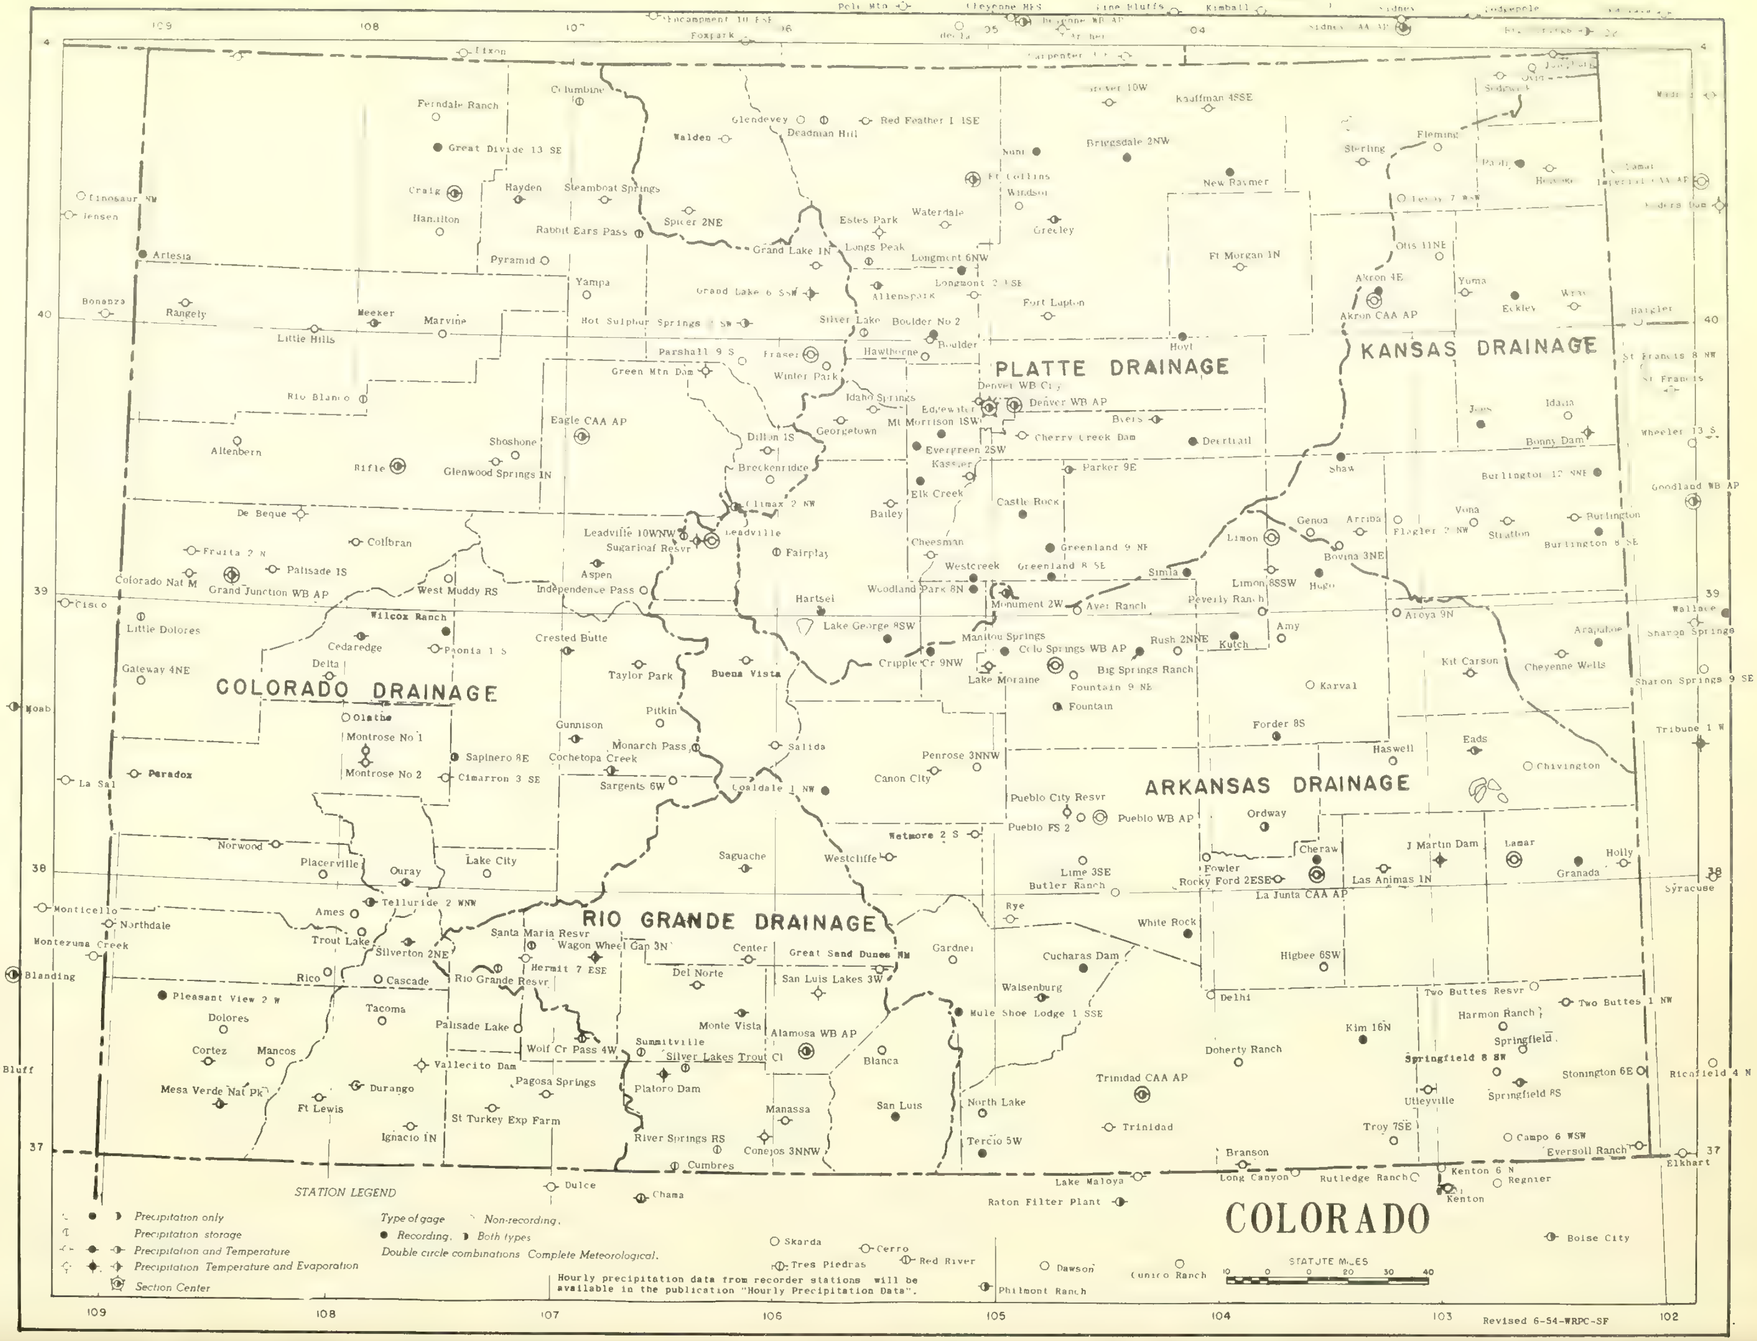
Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder station. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

W.R.P.C. Chattanooga--10-1-54--1075--



Hourly precipitation data from recorder stations will be available in the publication "Hourly Precipitation Data".

CLIMATOLOGICAL DATA

COLORADO

SEPTEMBER 1954
Volume LIX No. 9

CHATTANOOGA: 1954

WEATHER SUMMARY

Temperatures higher than September normals prevailed in all divisions of the State, with the southeastern and extreme eastern portions of the State showing the largest plus departures and the southwestern portion showing more nearly normal temperatures. The somewhat excessive rainfall west of the Continental Divide was offset by below-normal precipitation over the eastern plains country.

Colorado's average temperature of 61.3° for September was 2.9° above the normal. The general pattern of near-normal temperatures west of the Continental Divide and warm, dry weather over the eastern plains continued throughout the month, establishing a substantial positive temperature anomaly for the Arkansas Drainage Basin Division. The highest daily maximum temperature, 101°, was reached at Eversoll Ranch in Baca County on the 18th. Holly, La Junta Airport, Las Animas 1 N, Rocky Ford 2 ESE, were other stations also in this Division that recorded a maximum temperature of 100°. The highest monthly mean temperature of any one station, 75.6°, was reported at Holly in Prowers County. Statewide, most of the maximum daily temperatures occurred on or near the first day of the month. During the cold spell of the 19th-21st and again on the 29th and 30th, most stations reached their minimum temperatures for September. Fraser in Grand County dropped to 8° on the 21st. Walden recorded a minimum of 16° on the 20th, and Grand Lake 1 N a minimum of 19° on the 21st. The lowest mean temperature of 46.2° for the month was noted at Climax 2 NW at an elevation of 11,300 feet. Scattered frosts occurred in the San Luis Valley, along the Continental Divide, and in the northwest portion of the State during the two cold spells of the month.

The average monthly precipitation of 1.58 inches for the State was above the normal by 0.19 inch. Normal to heavy precipitation fell west of the Continental Divide during the period of the 1st to the 16th, but only light scattered rain occurred over the southern plains area. A generally dry spell from the 17th to the 22nd was followed by widespread rains from the 23rd to the 30th, varying in amounts from light showers in the east portion to heavy downpours over the north central higher elevations. The greatest rainfall for the month occurred at Cascade in San Juan County, where a total of 5.10 inches was measured. Other measurements were: Rico, 4.80; Trout Lake, 4.75; Hamilton, 4.50; Ames, 4.37; Norwood, 4.24; and Meeker, 4.00. Grand Junction Airport reported the wettest September since 1941 and the most rain in any month since August 1953. For the greatest 24-hour amount, Sedgwick, in Sedgwick County, reported 2.05 inches on the 14th, with hailstones ranging in size from one-half to one and one-half inches in diameter and covering the ground to a depth of two inches in some instances. Heavy precipitation also occurred at Denver on the 3rd, in Weld, Morgan and Washington Counties on the 5th-7th, and at Colorado Springs on the 7th, with attendant damage from hail and excessive runoff. The dryness of the eastern plains was characterized by absence of any rainfall at Holly, Cheyenne Wells, Kauffman 4 SSE, and Ordway. Precipitation at Pueblo Airport was only 3 percent of normal, with only two other Septembers of record, 1892 and 1916, showing less moisture. Snowfall totals at representative points over the State were 3.8 inches at Independence Pass, 3.3 inches at Climax 2 NW, 2.0 inches at Sedgwick, and lesser amounts at a few other stations.

Soil preparation and planting of fall grains continued during the month. In the drier areas, considerable replanting was necessary; however, August plantings in areas with sufficient moisture were showing well. Harvesting of forage crops was nearly completed, the last cutting of alfalfa and the native hay crop having been gathered by the end of the month in most areas. Corn, sugar beets, potatoes, tomatoes, and other row crops matured rapidly, but shortage of irrigation water and scant rainfall during critical periods, especially in the drought areas, were adverse factors. Harvesting of pinto beans in the southwest portion was underway early in the month, and the Elberta peach crop, and other early fruits were picked and marketed. Apple and pear crop prospects were good, with harvesting of most late fruits about completed during the month. Ranges and pastures deteriorated steadily throughout the month in the plains areas to the poorest condition in several years. Supplemental feeding of livestock was necessary in areas most affected by drought. Condition of sheep remained generally good, but cattle were below the usual standards for this time of year. There was considerable movement of livestock to market. Subsoil moisture conditions and storage water for irrigation generally showed no improvement, and the dry-land farming areas of southeastern Colorado remained in critical condition.

SEVERE STORMS

Thunderstorms during September, as reported by the State Climatologist at Denver, damaged property and crops for an estimated total loss of nearly $225,000. The storm that occurred at Denver between 3:00 and 4:00 p.m. of the 3d was most severe from downtown Denver southward, covering an area of about 12 square miles. Lightning caused power failures and minor fires, and heavy downpour and runoff caused numerous automobile accidents resulting in one death and eight injuries. Property damage was estimated at $6,000. Lightning damaged television antennas and towers, set fire to 100 tons of hay, and killed 4 head of cattle near Coalmont in Jackson County on the 27th, and damaged a power plant on the 5th at Peetz, Logan County, by a direct hit. Moving across Sedgwick County from northwest to southeast, a 3-mile wide hailstorm on the 14th caused an estimated $100,000 damage to crops. Colorado Springs suffered property damage from heavy rains, moderate hail, and heavy runoff on the 7th, with losses also reported in the counties of Weld, Morgan, and Washington.

REACTIVATED STATION

Station	Index No.	County	Drainage†	Latitude	Longitude	Elevation	Observation time Temp.	Observation time Precip.	Observer	Refer to tables
GUFFEY 10 SE	3656	FREMONT	1	38 41	105 23	8200		4P	MRS CLARA G NASH	3

---

† 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1 beginning January 1949.

Data in the column formerly headed "No. of Days .01 or more" in Table 2, have been changed to "No. of days .10 or more" effective January 1, 1954.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder station. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

COLORADO

OCTOBER 1954
Volume LIX No. 10

CHATTANOOGA: 1954

WEATHER SUMMARY

An above-normal temperature average and a below-normal precipitation average characterized Colorado's weather for October. Generally persisting until the 24th, spells of well above-normal temperatures were broken when a cold air mass, following a storm from the north, brought low temperatures for the remaining seven days of October. Areawise, a wide band of below-normal precipitation totals for the month extended from northeastern to southwestern Colorado and generally encompassed the entire ridge of the Continental Divide, while along the northwestern slopes of the Divide and in the southeastern plains area above-normal rainfall measurements were totaled. The snowfalls experienced throughout the State were generally below the seasonal averages, with accumulations melting rapidly except at the higher elevations.

The average monthly temperature of 49.5° for the State was 2.0° above the normal, with only the Kansas Drainage Basin Division showing a negative departure of 1.7°. All other divisions showed positive anomalies from a plus 1.3° in the Platte Division to a plus 3.3° in the Rio Grande Division. Statewide, warm temperatures prevailed during the periods of the 1st-4th, 7th-10th, and 17th-23rd. Most of the highest daily maximum temperatures recorded occurred on the 1st, 2nd, or 3rd. Eversoll Ranch in Baca County reached 98° on the 3rd for the State's highest daily temperature of the month. Las Animas 1 N had 96° on the 2nd, and Rocky Ford 2 ESE and Holly had 95° on the 2nd. At Pueblo, a maximum temperature of 89° on the 1st set a new record for that date. All stations experienced their lowest daily minimum temperature during the last week of the month. For the lowest in the State, Walden in Jackson County dropped to a -3° on the 27th, Fraser a -2° on the 28th, and both Lake Moraine and Dillon 1 S a +1° on the 27th. Freezes or first killing frosts occurred generally in the Arkansas and Colorado Drainage Basins on the 14th during a brief cold spell.

Colorado's average precipitation for the month was 0.97 inch, a shortage of 0.26 inch as compared to the normal of 1.23. Above-normal precipitation occurred in the Kansas and Arkansas Drainage Basins in eastern and southeastern Colorado, with averages showing plus departures of 0.35 inch and 0.15 inch respectively. Elsewhere, precipitation averages were below normal. The greatest monthly rainfall total was reported from Cascade in San Juan County, at which station a total of 2.77 inches was measured. In northwestern and southeastern Colorado many stations reported a total of over two inches for the month, among which were Cheyenne Wells 2.60, Branson 2.58, Karval 2.54, and Steamboat Springs 2.40. In contrast, no rain at all fell at Monte Vista in Rio Grande County. A general period of precipitation throughout the State extended from the 2nd to the 14th, as a series of storms with attendant strong winds swept across Colorado, bringing snow at the higher elevations and heavy rainfall in the lower Arkansas Basin where amounts ranged from one to two inches at most stations. The heaviest 24-hour precipitation for the month occurred on the 6th and 7th. Campo 6 WSW measured 1.78 inches on the 7th, Troy 7 SE 1.73 on the 6th, and Utleyville 1.70 on the 6th. Dry, warm weather prevailing from the 15th to the 23rd was interrupted by a storm on the 24th-25th that moved across Colorado from the north, bringing strong winds, cold air, and near average amounts of precipitation in the north central and extreme western parts of the State, but widely scattered and very light rainfall elsewhere. In the eastern part of the State scattered showers continued through the 29th. The month's greatest total snowfall, 22.0 inches, fell at Climax 2 NW, Fraser measured the greatest depth, eight inches, on the 25th. The weighted average snowfall for the State was 1.1 inch.

As reported by the U. S. Department of Agriculture Marketing Service, weather conditions in eastern Colorado were favorable for harvesting and general farm work. Rainy weather on the Western Slope hindered dry bean harvest and fall work as a whole but was beneficial to the winter apple crop. Killing frosts came later than usual, extending the growing season by two to three weeks and permitting some late-planted sorghum acreage, which earlier had promised only forage, to be harvested for grain. By November 1st, approximately 90 percent of the sugar beet crop and all of the potato and dry bean crop had been harvested. Weather was favorable for corn harvest and for saving maximum feed from the crop that developed. Fruit growers in the western part of the State harvested one of the best fruit crops in many years. In general, range conditions were at the same relatively low level as reported in three of the past four years except in the western and some southeastern sections where rains and late killing frosts permitted some late-season growth of vegetation.

Louis Billones

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1 beginning January 1949.

Data in the column formerly headed "No. of Days .01 or more" in Table 2, have been changed to "No. of days .10 or more" effective January 1, 1954.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder station. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

COLORADO

NOVEMBER 1954
Volume LIX No. 11

ASHEVILLE: 1955

WEATHER SUMMARY

November weather had the same principal characteristics as that of October; an above-normal temperature average and subnormal precipitation. Deficiency in precipitation was most general in the Arkansas, Kansas, and Rio Grande Drainage areas, but the southern portion of the Platte and extreme southern part of the Colorado Drainage areas also had minus departures, as well as a narrow east-west strip in the northern part of the Colorado Drainage immediately north of the 40° parallel. The greatest average deficiency was over the Rio Grande Drainage area and the least that for the Colorado Drainage area where plus departures in the central portion almost exactly offset minus departures in the extreme southern portion. The drought which prevailed in October intensified with a progressive decrease in moisture content of the soil throughout the month and consequent deleterious effect on all growing vegetation. This also rendered the soil less friable for plowing and otherwise less suitable for general preparation and seeding. High winds prevailed over most of the State on the 27th - 30th, and about $2000 damage due to wind was reported.

All stations reporting temperatures had plus departures varying from +7.6° at Collbran to +1.6° at Fruita. Unseasonably high temperatures were general throughout the month except during the first four days and the last three. The monthly mean temperature, 39.5°, was 4.6° above the November normal. The highest temperature was 80° recorded at John Martin Dam, Lamar and Las Animas 1 N, all on the 16th. The lowest recorded temperature was -19° at Sugarloaf Reservoir on the 30th. Canon City, near the Royal Gorge, on the Arkansas River, had the highest monthly mean temperature, 49.6°, and Climax 2 NW, a high altitude station northeast of Leadville, had the lowest monthly mean temperature, 27.0°. Temperature departures were quite uniform in all Drainage areas, varying from +4.2° for the Kansas to +4.8° for the Arkansas.

The monthly average precipitation was only 0.65 inch or approximately 78 percent of normal. Independence Pass, west of and just below the crest of the Continental Divide in the Colorado Drainage area, had the heaviest precipitation, 2.48 inches, while Two Buttes 1 NW, near the southeastern corner of the Arkansas Drainage area had no precipitation at all. The greatest amount of precipitation during an observational day, 0.97 inch, occurred at Eagle CAA AP, on the 29th. Snowfall averaged 5.7 inches as contrasted with a 59-year average of 8.2 inches for November. Five stations reported total snowfall of 20 inches or more. Marvine had 26.7 inches, Wolf Creek Pass was a close second with 26.0 inches, Sugarloaf Reservoir 23.0 inches, Grand Lake 1 N 21.0 inches and Winter Park 20.0 inches. Thirty-one other stations reported monthly totals of 10 to 20 inches. Heaviest snowfall was in the Colorado Drainage area and the lightest in the Kansas Drainage area with the Rio Grande area only slightly more. The greatest depth of snow on the ground on any date was 20 inches at Sugarloaf Reservoir on the 30th. Collbran, Crested Butte and Eagle CAA AP had 16 inches on the ground on the same date.

The continuation of drought conditions was detrimental to winter grains, ranges and pastures. The U.S. Department of Agriculture reported condition of ranges in the eastern part of the State the poorest since 1939. On the Western Slope range conditions were near normal. In general livestock were in good condition, benefited by the mild, open weather and supplemental feeding. Although marketing of livestock was heavy up to near the middle of the month, it increased appreciably during the third week and still continued heavy at the end of the month. Harvesting of sugar beets was completed about the 20th.

There was some blowing dust in the extreme east-central part of the State during the early part of the month and strong winds with blowing dust east of the Continental Divide preceded the onset of the much cooler weather on the 27th - 28th. Conditions were favorable for soil preparation and other ranch activities until near the end of the month although surface and subsoil moisture continued deficient and had gradually worsened throughout the month. Locally there was some fall plowing.

During the last few days of the month, the high winds that prevailed over most of the State were accompanied in many sections by moderate snowfall. The State Climatologist at Denver reported that drifting snows slowed transportation in some areas and winds damaged transmission lines and uprooted trees in the Silverton and Wolf Creek Pass areas. Reported damage amounted to $2000.

H. P. Parker

† 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1 beginning January 1949.

Data in the column formerly headed "No. of Days .01 or more" in Table 2, have been changed to "No. of days .10 or more" effective January 1, 1954.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

COLORADO

DECEMBER 1954
Volume LIX No. 12

ASHEVILLE: 1955

WEATHER SUMMARY

December was characterized by an average temperature somewhat above normal, and a precipitation average below normal. The precipitation deficiency was most marked in the Colorado and Rio Grande Drainage areas, although all areas displayed minus averages. Some stations showed above normal departures, but these were well in the minority. The drought of the past few months has been intensified by reason of insufficient rainfall, high winds, and lowered water tables. In connection with the latter, the U. S. Geological Survey states: "In the key well near Denver, the level was the lowest of record; and in the key well near Crystal Springs, the level was record-low for December." Periods of high winds occurred near the beginning, middle, and end of the month, the highest reported being 54 m.p.h. at Pueblo on the 4th. Several other stations reported winds over 30 m.p.h. at various times of the month.

The average temperature for the State was 27.2°, or 1.2° above normal. Mean temperatures at most stations in the Colorado Drainage area were below normal. In all other drainage areas average temperatures at most stations were above normal. Passage of a cold front on the night of the 27th - 28th resulted in excessive temperature ranges. As an example: Fraser, at 6:00 p.m. on the 26th, reported a temperature of 17°; thereafter it dropped steadily to -36° on the night of the 27th and morning of the 28th, and then rose to 19° on the afternoon of the 28th.

The highest temperature reported was 75° at Holly on the 4th; the lowest was -36° at Fraser, just west of the Continental Divide, on the 28th. Canon City, on the Arkansas River, had the highest monthly mean temperature, 41.6°; the lowest mean monthly temperature was 3.3° at Cochetopa Creek, near Gunnison. The average temperature for the Colorado Drainage Basin was below normal, the average temperatures for all other drainage areas being above normal.

The average precipitation for the State was 0.58 inch, or 0.36 inch below normal. The heaviest monthly total of precipitation was 2.51 inches at Wolf Creek Pass 4 W; the least was a trace at San Luis Lakes 3 W and Utleyville. The greatest 24-hour amount reported was 2.05 inches at Wetmore 2 S, on the 27th. Snowfall for the month averaged 6.8 inches, which was 4.1 inches below normal. Wolf Creek Pass 4 W, had the greatest total snowfall for the month, 36.0 inches. There were seven additional stations reporting totals of 20 to 30 inches, and thirty-six stations reporting totals of 10 to 20 inches. The heaviest average fall occurred in the Colorado Drainage, with the Rio Grande Drainage area showing the lightest average fall. The maximum accumulation on the ground, 21 inches, occurred at three stations; Crested Butte on the 4th; Independence Pass on the 4th and 7th; and Winter Park on the 31st.

Continuing drought conditions were unfavorable for winter grains, pastures, and ranges, all of which showed some deterioration. There was considerable damage by winds in the way of soil drying and erosion. This was particularly true on the 16th, 17th, and 18th, when strong winds and blowing soil over most of the State east of the 105th Meridian caused severe erosion and damage to winter grains, pastures, and ranges, as well as damage to some automobiles, small buildings, and other property. There was some preparation of soil in the east and south at the end of the month. Although pastures and ranges were snow-covered west of the Continental Divide, and dry east of it, livestock were in fair to very good condition, due to supplemental feeding.

L. W. Browne

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1 beginning January 1949.

Data in the column formerly headed "No. of Days .01 or more" in Table 2, have been changed to "No. of days .10 or more" effective January 1, 1954.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 a.m., MST. WTR EQUIV in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

-	No record in Tables 3, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
C	In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in Hourly Precipitation Data.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
S	Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CORRECTED DATA

MAY 1954	PLATORO DAM	TABLES 2 and 5: Min temperature on 29th should be 22°, mean min 27.4, mean 42.7 and total degree days 684. TABLE 6: Evaporation on 1st should be .23 and monthly total 6.05. Wind movement on 1st should be 40 and monthly total 1649.
AUGUST 1954	KIT CARSON	TABLES 2 and 3: Precipitation on 29th should be .00, monthly total 3.93, departure 2.11, greatest day 2.41 on 19th and days with .10 or more 5, .50 or more 2 and 1.00 or more 1.
	PLATORO DAM	TABLES 2 and 5: Max temperature on 7th should be 59°, mean max 67.3, mean 51.3 and total degree days 416.
NOVEMBER 1954	ASPEN	TABLE 2: Total snowfall should be 14.0 and greatest on ground 10 inches on 30th.
JULY 1954	VALLECITO DAM	TABLE 6: Wind monthly total should be 270.

COLORADO

ANNUAL SUMMARY 1954
Volume LIX No. 13

ASHEVILLE: 1955

WEATHER SUMMARY

GENERAL: The two outstanding features of Colorado's 1954 weather were the persistent dryness in all but a very few small areas, and the unusual average warmth. It was one of the warmest -- if not actually the warmest -- years since records began in 1888. Every month except March averaged well above normal temperatures. Only two months averaged above normal total precipitation, and the excesses in both cases were very small. It was certainly one of Colorado's driest years. There were a number of destructive storms, mostly during the April-September period.

TEMPERATURES: The average temperature for the State as a unit was 48.7°, 3.4° above normal. The pattern of unusual warmth varied little from division to division, and the only interruption for the State as a whole -- outside of occasional cold "snaps" of a few days -- was during March, which was the only month of the year to average below normal (-1.1°). February, the average for which was 37.4°, 10.1° above normal, was by far the warmest for that month during the period of record which started in 1888. The station with the warmest average for the year was Holly, with 58.1°, 4.1° above normal. The coolest station was Climax 2 NW, with an average 33.8° for the year (not enough record is on hand to permit computing normals). At Frazer, another cool point, the yearly average 35.5° was 2.6° above normal. Yearly extremes ranged from the highest, 114° at Sedgwick on July 11, to the lowest, -36° at Frazer on December 28.

PRECIPITATION: Probably the most important feature of the 1954 Colorado weather year was the extreme dryness which prevailed with only a very few local exceptions in Arkansas and Colorado River Drainages. All stations in Kansas, Platte, and Rio Grande Drainages, without exception, were drier than normal, and quite a few had totals less than half normal. In the Kansas Drainage, Burlington had only 36 percent of normal, and Stratton only 41 percent. Eleven months of the year were drier than normal in the Kansas and Platte Drainages. The Rio Grande Drainage received only 59 percent of normal precipitation, the Kansas Drainage 60 percent, and the Platte Drainage 62 percent. While still quite dry, the Arkansas and Colorado Drainages fared a little better, with average totals 71 percent and 78 percent of normal respectively.

The average total for the entire State was 11.71 inches, 4.83 below normal. By Drainages, the greatest deficiency was in the Kansas, where the average total, 10.46 inches, was 6.99 inches below normal. The driest station was Monte Vista, with a 4.68-inch total, 2.48 inches below normal. Burlington's 6.18-inch total was 11.17 inches short. The wettest station for the year was Wolf Creek Pass 4 W, where the 40.37-inch total still was 9.36 inches below normal. The largest above-normal departure for the year was at Spicer 2 NE, with 16.27 inches, +3.88, followed by Meeker, 19.21 inches, +3.35. Nearly all of the stations with above normal precipitation are in the Colorado Drainage, with only four exceptions; two in the extreme northwest corner of the Platte Drainage, and two in the Arkansas Drainage. It was an extremely dry year east of the Continental Divide.

DESTRUCTIVE STORMS: Although precipitation was subnormal there were still a number of severe storms. Beginning on February 13 and ending on August 7 tornadoes occurred somewhere in Colorado at least once each month, and there were at least nine reported all together. However, all these tornadoes were small, and total damage was under $10,000. High winds occurred throughout the year, and damage to soils from blowing was high because of the dry conditions prevailing during nearly all windy periods, particularly during the February-September interval. Few sections east of the Divide escaped this type of windstorm during the year. Hail damage occurred at intervals beginning on April 12 at Vineland, near Pueblo, and ending about the middle of September. Total damage from these hailstorms was in the millions. A few of the most severe hail occurrences include storms in Larimer and Weld Counties on June 30 (estimated damage $100,000), at Aurora and Hoffman Heights on July 27th (estimated damage $1 million), near Fowler the same day (estimated damage $100,000), in extreme northeastern Colorado on August 16 (estimated damage $350,000), and in Sedgwick County on September 14 (estimated damage $100,000).

On July 14 a heavy rainstorm in Denver flooded basements, etc., causing $500,000 in damage. A very heavy rain fell on July 22 in the Arkansas Drainage, causing some flooding along the Purgatoire River; but the resulting increase in water stored in the John Martin Reservoir was beneficial. There was damage from cloudburst-caused flash flooding near Ordway on July 25, with some stock killed by lightning from the accompanying thunderstorm. There was a series of damaging floods in August, beginning along both sides of the Arkansas and Platte Drainages on the 5th, causing over $1 million in damages to roads, bridges, etc., in Elbert, Douglas, and El Paso Counties, and ending with overflowing streams on the 20th and 21st near Evergreen and in Plum and Cherry Creeks. In September both Denver and Colorado Springs areas suffered flash flood damages from heavy showers -- on the 3rd on the south side of Denver and on the 7th at Colorado Springs.

Damaging lightning accompanied many of the season's thunderstorms. A lightning-caused fire near Loma on April 25 damaged radio equipment to the extent of $5,000. On July 12 a person was killed by lightning near Coaldale, and there were a number of injuries and stock losses, as well as some property damage, from lightning strikes at other times during the month. Lightning also caused damage and loss of livestock on August 5 in a few places along the Arkansas-Platte Divide. One person was killed by a strike in the Black Forest on August 13.

The year's outstanding weather effect on agriculture was the extreme dryness in the eastern two-thirds of the State. In addition to excessive heat, blowing soil, and several severe local storms, the persistent shortage of precipitation during the growing season was detrimental to all crops, but was particularly hard on eastern ranges and dry-land grains and hays. Only where irrigation supplies were adequate did crops do well. Fruit did very well west of the Continental Divide, except for some minor frost damage early in June. Grain yields and hay crops were below average, and range conditions were substandard all year.

Cattle condition was only fair the last few months of the year in some sections, but there were some herds in very good condition where sufficient feed had made supplemental feeding possible. Sheep seemed to withstand the dry ranges somewhat better than cattle. Dry land hay crops were very short, and some irrigated hay fields suffered from short water supplies the last half of the season. Stock water was short in some eastern areas nearly all year. As the year closed, winter grains, ranges, and pastures were still deteriorating because of the drought, and soil moisture was extremely low east of the Divide.

R. A. Dightman

# REACTIVATED

---

† 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.
LENGTH OF RECORD IN YEARS, HAS BEEN REVISED TO SHOW THE TOTAL NUMBER OF YEARS IN WHICH RECORDS ARE COMPLETE FOR ALL 12 MONTHS OF THE YEAR EXCEPT FOR "EVAPORATION" STATIONS IN WHICH CASE THE NUMBER OF COMPLETE RECORDS FOR THE SEASON BETWEEN FREEZING IN SPRING AND AUTUMN IS SHOWN.

REFERENCE NOTES

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F; precipitation and evaporation in inches, and wind movement in miles.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

The four digit identification numbers in the Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.

-	No record.
+	Also later date (dates) or months.
*	Amount included in following measurement.
//	Gage is equipped with a windshield.
B	Adjusted to full month.
C	Data for recorder stations denoted by "C" are processed for special purposes and published in "Hourly Precipitation Data". Length of record for recorder-only stations may be found in the annual issue of "Hourly Precipitation Data".
E	Amount is wholly or partially estimated.
M	Less than a complete month of record available; if average value is entered, less than 10 days of record are missing. See monthy Climatological Data for detailed daily record.
R	Data from recording gage.
T	Trace, an amount too small to measure.
V	Includes total for previous months. V in annual column means total is for a two-year period.
S	Storage precipitation station. Data will be published in the July or August or delayed data December issue of Climatological Data.

Additional information regarding the climate of Colorado may be obtained by writing to any Weather Bureau Office or to the State Climatologist at, Weather Bureau Office, P.O. Box 1079, Denver 1, Colorado.
